

LAB 6B

ZAINAB TARIQ

CIS 22-26

OUTPUTS

Problem 1) Develop a page for storing and retrieving a value “43854” of a variable “W” using hidden form field? Is it possible to alter W at client end? Try to implement a code for altering W at client end?

Hidden Field with VB.NET

Initial value of W: 43854

Problem 2) Develop a web form having a list box filled with customer names. Fill customer names in text and customer id in value properties of list items. Try to transfer the selection of list item made by user to another page using query string. Add a few more web controls on web form. Extend your code to transfer all selected/entered values to a second web form using query string.

Select Customer Info

Gender:

- ☐ Male
☐ Female

Received Customer Details

Customer Name: Zain

Customer ID: C103

Email: zainabtariq1326@gmail.com

Gender: Female

Problem 3) Develop a web form that implements the following scenario:

Upon first time access of page by customer a cookie is stored in user browser (make it persistent). Within the cookie store customer name and date and time values. When the customer revisits the same page and the cookie is found, retrieve the stored values and display on the page.
